

SUNDARESWARAN MURUGAN

Full Stack Developer • AI/ML & Deep Learning Enthusiast

Virudhunagar, Tamil Nadu, India | +91 8682933496 | sundareswaran00007@gmail.com

[Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFILE SUMMARY

Third-year BCA student with full-stack experience (React JS, Spring Boot, Python Flask, MongoDB/MySQL) and a growing focus on Machine Learning and Deep Learning. Built a CNN + Random Forest crop-advisory system that won first prize at a state-level hackathon. Comfortable across the stack, now applying that foundation to real-world ML/DL problem solving.

EDUCATION

Bachelor of Computer Applications (BCA)

2024 – Present

VHNSN College, Virudhunagar | CGPA: 7.73 (up to 4th Semester)

TECHNICAL SKILLS

Machine Learning / Deep Learning: CNN, Random Forest, NumPy, Pandas, Model Training & Evaluation

Languages: Python, Java, C++, JavaScript, PHP

Frontend: React JS, HTML5, CSS3 (animations & transitions), JavaScript

Backend: Spring Boot, Python Flask

Database: MongoDB (Atlas), MySQL

Networking & OS: Core networking concepts, Cisco Packet Tracer, Operating Systems fundamentals

Automation & AI Tools: n8n (workflow automation), Claude (AI-assisted development)

Tools & Platforms: Git, VS Code, Jupyter Notebook, Google Colab, Spyder, MS Office

PROJECTS

Tomato Crop Advisor System

[Live Demo →](#)

Machine Learning | Python, CNN, Random Forest, NumPy, Pandas

- Built a dual-model crop advisory system combining a Convolutional Neural Network (CNN) for leaf-disease image classification with a Random Forest classifier for structured agronomic data.
- Used NumPy and Pandas for data preprocessing, feature engineering, and pipeline management; benchmarked both models for accuracy and reliability on real-world crop data.
- Awarded 1st Prize at a state-level hackathon (Dept. of PG CS, Rajapalayam Raju's College, Rajapalayam — 9 Sep 2026) for this project.

Packing List App

[Live Demo →](#)

Full Stack | React JS, Spring Boot, MongoDB Atlas • Deployed

- Developed a full-stack packing-list management app with a React front end and a Spring Boot REST API backend.
- Integrated MongoDB Atlas as the cloud database; deployed frontend on Vercel and backend on Render for a complete production-style pipeline.

Hospital Management Web Application

[Live Demo →](#)

Full Stack | HTML, CSS, JavaScript, React JS, Spring Boot • Deployed

- Built a multi-page, role-based application with separate Patient, Doctor, and Admin portals with secure login.
- Designed a Patient Dashboard (medicines, dosage timings, treatment history, appointments) and a Doctor Portal with schedules and treatment records.
- Created an Admin Panel for patient-to-doctor assignment and duty scheduling, with WhatsApp notification integration via wa.me.
- Ensured full responsiveness across devices using CSS Grid and Flexbox.

ACHIEVEMENTS

- 1st Prize, State-Level Hackathon — organized by the Dept. of PG Computer Science, Rajapalayam Raju's College, Rajapalayam (9 September 2026), for the Tomato Crop Advisor System built using CNN and Random Forest algorithms.

WORKSHOPS & TRAINING

- Internship Training Programme — React JS & Spring Boot (Aug 2025)
- Agentic AI & Prompt Engineering Programme – W3 Digital Solutions & Menthee Technologies (Jul 2026)
- UI/UX Webinar — Brand Monk Academy (Mar 2026)
- Workshop on RPA with UiPath (Dec 2024)
